

Release Notes for ASNA DataGate® for SQL Server® Version: 15.0.81.0
Release date: 2020-06-17

What's New

DataGate® for SQL Server® 15.0 supports the latest Microsoft® operating systems, including Windows 8.1 Pro, Windows 10, and Windows Server 2012 R2. It supports the latest releases of ASNA Visual RPG® and Monarch®.

Secure socket layer integration allows for much simpler security solutions.

Optional support for **multimember files** has been added as well.

Note: Users updating from an older version of DSS should not activate the new multimember support unless necessary, as it may cause errors.

Installation Notes

Installing Microsoft's latest service packs, high priority, and optional software updates for Windows and the .NET Framework is highly recommended.

Installing onto Clustered Servers

DSS can also be installed onto clustered servers by following the instructions detailed in our [Installation Guide](#).

Software Requirements

- **Windows desktops and servers** 8.x Pro, Windows 10, Windows Server 2012, 2012 R2, or 2016.
- **Microsoft SQL Server** SQL 2008R2 through 2017
- **.NET Framework 4.5** - ASNA DataGate for SQL Server requires the .NET Framework 4.5 for correct operation.

Note If this software is downloaded via Microsoft Internet Explorer or Edge you may receive a message stating that this file "is not commonly downloaded" when attempting to install it. In this event click the **View Downloads** button, select the ASNA product to install from that list, and confirm that you'd like to install it.

Similarly, attempting to install the software directly through Microsoft Windows may cause a "Windows protected your PC" message to appear. In this event click the small **More Info** prompt on the left, and click **Run Anyway** on the following window.

Changes Since Version: 15.0.78.0

Clients - DataGate

- Case 20700. Keys with zoned data may result in invalid access in Spanish PCs.
